Note to Unitholders

Mr. Rajeev Thakkar
CIO - Equity & Director

Tuesday, August 4, 2026

TL;DR version: Nothing changes, you don't need to read this.

If you do, however, insist on reading this, here goes.

If one goes by the noise on social media, it will seem like there is something unusual happening in the world of equity investments, especially in India. This is mainly driven by the fact that for about two years now, equity markets have not delivered returns that some people were hoping for / expecting / predicting.

This, however, is a feature and not a bug of equity investments. Equity markets having a relatively rangebound period or even one where prices come down, happens on many occasions. If the equity markets were to deliver predictable returns every 3 months, 6 months, and a year, there would be no concept of a bank fixed deposit. The precise reason why equity investments can “potentially” deliver higher than fixed deposit returns is the accompanying volatility. This period of a sideways kind of market that we are going through is neither noteworthy for its duration nor for the magnitude of fall from the peaks.

Which brings us to the “burning” topic of the performance of our equity funds, especially the Parag Parikh Flexi Cap Fund. We have been communicating regularly with our clients, distribution partners and advisors through our media interactions, conference calls, and primarily through our unitholders' meetings. Our unitholders' meeting will happen in due course but given the chatter by a few busybodies, it is probably appropriate to put out a short note as well.

Burning Topics

- **Absolute performance**

The discussion goes like this. “Equity markets / fund xyz have not even given me bank FD returns”. As was pointed out above, the only way to guarantee a bank FD return is to make a bank FD. Given the exuberance in 2024, our team at PPFAS in all our public interactions were guiding caution in terms of absolute returns. Given our outlook, we were mocked by various people for caution in deployment of cash and our rising cash levels.

An update on our outlook: Given the two years of time correction in the overall markets and price correction in some segments, the available opportunities are increasing, and the outlook for future returns here on appears to be improving.

- **Relative performance**

The relative performance of our schemes over a cycle has been satisfactory. There will be multiple periods of 3 months, 1 year or more where the stocks in our portfolio will look to be not doing much or falling in prices. This is especially true for our schemes where we frequently buy stocks and sectors that are out of favour with the market. In such times, the relative returns will not look pretty. In terms of “underperformance”, the current period is not noteworthy for either the period of underperformance or the magnitude of the same. Those who attribute the underperformance of our scheme in the short term to the large AUM are too kind. I have managed a much larger underperformance in the year 2007 on a PMS AUM base of slightly over ₹ 100 crores.

- **Cash levels**

Cash levels peaked at about 25%. They are down to about 14%-15% in Flexi Cap. We are increasingly finding opportunities to buy, and one may look forward to single digit cash levels in some time. Our staying in some cash over the two years has not harmed investor returns and at the margin has helped on account of the sideways market.

- **India has no AI models, Indian capital gains taxes, Securities Transaction Tax, Indian Rupee, India story, (some other worry around India)**

We collectively go through these manic / depressive mood swings on India. From being part of the BRICS, fastest growing major economy etc. to being classified as fragile five or as a has been economy, we are prone to taking the current narrative too seriously. At various points in time, various reasons are attributed to Foreign Portfolio Investor (FPI) selling or for the lack of returns. The interesting part is that none of these reasons are recent and India has been what it is for many years now.

- **IT Services, employment and so on**

The younger readers of this note may not resonate with this, but the older readers will remember a time when there were massive bank union protests around the computerisation of bank branches. Banks moved from handwritten ledgers to computerised branches, to networked branches on a centralised core banking system to internet banking to mobile banking. Despite this, banks today employ far more people in the banking business as compared to the 1980s and 1990s.

To my mind, the fears around employment are largely overblown at the aggregate level. Sure, there will be individual companies and individual roles that may be under threat, and the pain around re-training and re-employment of the affected individuals will be real. However, it will be interesting to read the following two articles for those who have more interest in this topic.

[AI and the automation of work by Benedict Evans](#)
[Predicting AI job exposure by Benedict Evans](#)

On IT services, clearly we are outliers in terms of looking at the current sell off as an opportunity rather than an existential threat.

We have seen waves of changes where, for example, the passing of the Y2K threat was seen as an end to the need for outsourced IT services. Later, there were things like cloud computing and SAAS which were supposed to eliminate the need for outsourced IT services.

Our base assumption right now is that while Artificial Intelligence (AI) writes a significant portion of the code, the need for implementation does not go away. What was an outsourced activity to a team of people is now an outsourced activity to a team of people and AI.

While AI will eliminate some work, it will create more work in other areas. People who have been watching this space will note the increased concern around cyber security given the efficiency with which hackers can use AI. This will arguably create more work in cyber security.

We will of course be revisiting our assumptions as more data comes in. Also, our weightage to the sector is well within our comfort zone.

- **Global stocks, capex, depreciation**

Some worries have been expressed around the global environment in general and around the capex related to AI and the companies in our portfolio. It is a rapidly changing environment. However, based on the current information, it seems that the following can be said

- **Frontier and other model companies**

From a time early in this space where it seemed like OpenAI and ChatGPT would win all the way, there is now a proliferation of companies and models. OpenAI / ChatGPT, Anthropic / Claude, Gemini, Grok, Llama, DeepSeek, Kimi, GLM, Qwen and many more are fighting for this space. Increasingly, it looks like the latest and greatest model may not be the only winner and other aspects like sovereignty, access, costs per token and per task, speed, data privacy and so on will matter. Luckily for us, we have no direct exposure to pure play AI model companies like OpenAI or Anthropic

- **Hyper scalers**

Our investee companies can be termed as hyper scalers. These companies are the companies which run these massive data centers and offer cloud computing services and AI computing services to enterprises. Concerns have been raised around the capex of these companies.

An important point to note is that these companies have their traditional businesses apart from the newer AI related businesses. Microsoft for example still has enterprise software, Amazon still has e commerce and the traditional cloud business and Google still has its digital advertising and subscription business.

The new capital expenditure, while large, is backed by increasing demand from their enterprise customers. They are not tied to the success / failure of a single AI model. Is there some risk of over-investment here? Sure, it could happen. But over capacity will not be permanent in nature. It will get consumed in some time as the workloads increase over time. It will result in a slowdown in capex down the road if the demand takes time to scale.

- **Chip and memory companies**

These companies have been the biggest beneficiaries of the AI boom. The demand and margins have gone through the roof. It is almost a universal consensus that the current heady days are cyclical in nature, and the profit margins will mean revert. We have missed out on the upside in this space and are unlikely to have comparable downside exposure if there is a cyclical downturn here.

- **Banks, private sector banks, HDFC Bank**

We own a basket of private sector banks. Some time back there was heat on us for owning ICICI Bank around the time of the ouster of the previous CEO. Now there is heat on us for owning HDFC Bank. As such, these are institutions with close RBI oversight, diversified ownership, and robust governance mechanisms. There may be periodic challenges around some issue or the other. Unlike the massive fraud at one private sector banks where there was a systemic issue around the quality of borrowers or another one around the issues on under reporting of derivatives losses, the issues reported so far in HDFC Bank, while not desirable, do not appear to be materially threatening to the franchise of the customer base. Overall, there is no change to the outlook for the basket of the 4 private sector banks that we own.

- **Market coupling**

In the past, we have invested in several exchange / platform businesses. These were Multi Commodity Exchange of India Limited (MCX), CDSL (Central Depository Services Limited), Computer Age Management Services Limited (CAMS), and Indian Energy Exchange Limited (IEX).

Earlier, there was a chatter around MCX and its challenges around migration of the software platform. As that got resolved, people moved on. These days there is chatter around IEX and market coupling.

This is a sub 1% position for us at the portfolio level and among the many such investments we made at the time. While the regulator and the courts have given the go ahead to explore market coupling, there is no certainty as to how long this will take and in what form and for which market segments. Even if it is implemented, the view of market participants that the market share of the exchange will fall to 1/3rd of the total market seems simplistic (by that logic, if there are 100 stockbrokers, every one of them should have

a 1% market share).

We do not know anything apart from what is in the public domain, and we will revisit our investment thesis as and when developments happen and more data comes in.

- **Small and mid-caps**

We do invest in small caps and we do invest in mid caps. The Real Estate Investment Trusts (REITs) that we own for example, would all fall under the mid / small cap space. As always, we will invest where we find the opportunity and a favourable risk / reward and not be driven by labels.

Just sharing some data points to ponder on (taken from screener.in on August 4, 2026)

Nifty 100 PE Ratio (large cap)	20.8
Nifty Midcap 150 PE Ratio	30.7
Nifty Smallcap 250 PE Ratio	34.6

For all those who think that it is a law of physics that smaller companies deliver higher returns, I would like them to look at what is happening in the US markets.

- **Themes**

We have not been living under a rock. We do see the media headlines and are aware of Defense, Energy transition, AI, Fintech and other trends / themes in the markets. We will invest where we find attractive, actionable ideas and not invest purely on account of a theme being in fashion.

All in all, if your equity investments with us or elsewhere are part of a well thought out asset allocation appropriate to your needs, there is no need to worry at all.

Rajeev Thakkar

Chief Investment Officer - Equity and Director

Outlook

We continue to look at individual investments on their own merits and will not hesitate to invest if an opportunity looks attractive. As usual, our investment stance does not depend much on the macro-economic situation but is focussed on individual companies. We have about 14.74% in cash holdings, debt & money market instruments and arbitrage positions which can be deployed in long term investments at appropriate levels.

An open-ended dynamic Equity scheme investing across large cap, mid cap, small cap stocks.

JB Chemicals merged with Torrent Pharmaceuticals in July, while REC is proposed to merge with PFC. We used the price differentials between the respective stocks, relative to the announced merger ratios, to build the desired exposures at more attractive effective prices. This approach enabled us to benefit from temporary valuation gaps while maintaining exposure to the intended companies

Definitions

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
Application amount for fresh subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.
Minimum additional amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1 %, the investor will enter the fund at Rs. 101. Note - As per clause 11.7.1 of SEBI Master Circular for Mutual Funds, there shall be no entry load for all Mutual Fund schemes
Exit Load	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1 %, the redemption price would be Rs.99 per unit.
Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Beta	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Portfolio Turnover Ratio	A measure of how frequently assets within a fund are bought and sold by the managers. Portfolio turnover is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over a particular period, divided by the total net asset value (NAV) of the fund. The measurement is usually reported for a 12-month time period.
Yield to Maturity (YTM)	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
Total Expense ratio	The total expense ratio (TER) is a measure of the total cost of a fund to the investor. Total costs may include various fees (purchase, redemption, auditing) and other expenses. The TER, calculated by dividing the total annual cost by the fund's total assets averaged over that year, is denoted as a percentage.
Derivative	Derivative includes (i) a security derived from a debt instrument, share, loan whether secured or unsecured, risk instrument or contract for differences or any other form of security; (ii) a contract which derives its value from the prices, or index of prices, or underlying securities.
Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
