Value Investing principles!**

Parag Parikh Dynamic Asset Allocation Fund (PPDAAF)

An open ended dynamic asset allocation fund.

Category of the Scheme – Hybrid Fund

Investment Objective - The investment objective of the Scheme is to generate income/long term capital appreciation by investing in equity, equity derivatives, fixed income instruments. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk. However, there is no assurance that the investment objective of the Scheme will be achieved and the Scheme does not assure or guarantee any returns

INVESTMENT APPROACH AND PORTFOLIO POSITIONING

Parag Parikh Dynamic Asset Allocation Fund (PPDAAF) aims to generate returns from three components as mentioned below:

	How they return
Core equity	Potential Capital appreciation+ Dividend
Arbitrage	Arbitrage returns are market-driven and may vary from month to month depending on spreads and liquidity conditions
Debt Allocation	Coupon payments + amortization and mark-to-market valuation

Core Equity Allocation

On the equities side, the investment universe comprises of companies with:

- Good cash flows
- Being able to repay back to the shareholders either via dividends or buybacks
- Reasonable valuations
- Relatively Low beta and low volatility

Since the product is more suited for moderate-risk investors, the focus for allocation has been to be conservative on the equities side and at the same time aim to give better total returns (potential dividend income+ potential capital appreciation) relative to fixed income over a longer term. Over the last 12-15 months, equities markets have been challenging and hence the returns to the equity part of the portfolio haven't been that great apart from the dividends that we have received and re-deployed them in the portfolio. But over a longer-term frame, we remain positive on the fundamentals of the companies that we hold, and expect them to generate returns that are relatively better than fixed income without taking excessive risk.

Arbitrage Allocation

The portfolio's allocation to cash–futures arbitrage positions is driven by two key considerations:

First, the portfolio seeks to maintain a minimum overall equity exposure of 35%. Since the unhedged equity allocation typically ranges between 15% and 20%, the remaining equity exposure is achieved through allocations to arbitrage opportunities.

Second, when arbitrage spreads are higher than comparable money-market yields, the allocation to arbitrage may be increased, potentially taking the overall equity exposure beyond the 35% threshold.

Over the past calendar year, the allocation to arbitrage has been adjusted dynamically based on these factors. In the past calendar year, in some of the months, when arbitrage yields were relatively low (though still comparable to liquid fund yields), the allocation to arbitrage was reduced. Conversely, during the months, when arbitrage yields were materially higher than money market yields, the allocation to arbitrage was increased. In the recent months, arbitrage yields have improved largely in line with rising money-market yields, and hence the allocation to arbitrage have remained relatively stable.

Debt Allocation

The past calendar year was eventful from a bond market perspective. The Reserve Bank of India (RBI) has cut repo rates by cumulative 125 bps and introduced record liquidity measures in the form of Open Market Operations (OMO) and Foreign Exchange Swaps (FX Swaps) starting as early as December 2024. These steps were aimed at supporting credit growth and ensuring effective transmission of rate cuts. The measures also helped provide durable liquidity which had turned negative due to Foreign Portfolio Investors (FPI) outflows and the RBI's resultant Forex interventions over the year.

Yields across the curve declined after the RBI began cutting interest rates, with the 10-year G-Sec yield declining around 6.20% in May 2025. However, market sentiment weakened after the RBI changed its policy stance to neutral in June 2025, leading to a yields reaching a trough. Subsequently, weak institutional demand, coupled with increased state government bond supply, caused yields to reverse and trend higher. 10-year Government of India yield increased to over 6.70% in December 2025.

5-year Maturity Yields of G-Sec, SDL and PSU Bonds (Yields are annualized)

As seen in the chart above, 5-year yields declined after the RBI began easing operations in February 2025. However, from June 2025 onwards, yields have moved up consistently. We have considered 5-year yields for G-Secs, SDLs, and PSU bonds, as the average maturity of PPDAAF has ranged between 4-5 years, making these yields comparable.

PPDAAF Debt Portfolio

PPDAAF portfolio YTM over the past calendar year

Source: Portfolio disclosure PPFAS

The above chart shows how the PPDAAFs debt allocation portfolio yield has moved along with changes in market interest rates. The portfolio yield has increased by around 50 bps to 7.01% by the end of December 2025, after reaching its lowest point in May 2025.

PPDAAF Average Maturity, Macaulay Duration and Modified Days over the past calendar year

Source: Portfolio disclosure PPFAS

We expect the pressure at a shorter end of the curve to reduce after recent liquidity measures of the RBI. Elevated State Development Loan (SDL) issuances have continued to weigh on spreads, creating an attractive risk reward opportunity. Corporate bond yields have also risen, though they remain below comparable SDL yields beyond the 5-year maturity. With further policy easing likely behind us, we expect the RBI will maintain higher banking liquidity to support policy rates transmission. We will continue to focus on the 5–7-year G-Sec and SDL segment while remaining opportunistic in adding duration going forward.

Debt investments earn returns in two ways through regular interest income and changes in bond prices. When interest rates rise, bond prices tend to fall, which can lead to muted returns in the short term. The interest rate movements are normal and usually even out over a longer period. Higher interest rates today improve return potential over the medium term, as the debt portion of the portfolio continues to earn regular interest income that is being reinvested at higher rates.

The fund is designed for a minimum investment horizon of 2 to 3 years. In the short term, returns may fluctuate due to movements in interest rates, equity markets volatility, and change in arbitrage yields. The fund remains well positioned for a medium-term investment horizon.

This Product is suitable for investors who are seeking*	Parag Parikh Dynamic Asset Allocation Fund An open ended dynamic asset allocation fund.	
	Scheme's Risk-o-meter	AMFI Tier I Benchmark's Risk-o-meter (CRISIL Hybrid 50+50 Moderate Index TRI)
- Capital Appreciation & Income generation over medium to long term. - Investment in equity and equity related instruments as well as debt and money market instruments while managing risk through active asset allocation	 The risk of the scheme is moderate risk	 The risk of the benchmark is high risk

Parag Parikh ELSS Tax Saver Fund

An open-ended equity linked saving scheme with a statutory lock in of 3 years and tax benefit

An India-centric Scheme suitable for long-term capital appreciation

Parag Parikh ELSS Tax Saver Fund

India-centric Scheme

↳ At least **80%** of the Parag Parikh ELSS Tax Saver Fund's corpus will be invested in Indian equities.

It has the freedom to:

- ↳ Invest in stocks of small, medium and large-sized Companies based in India.
- ↳ Invest in any sector or industry within India which appears to be attractively valued
- ↳ Participate in buy-backs and other special situations within India.

About the Scheme...

It is an open-ended Equity Linked Savings Scheme (ELSS) with a statutory lock-in of 3 years and tax benefit from the date of investment for every investment instalment.

Indian investors who opt for old regime of income tax and invest in this Scheme are eligible for Income Tax deduction u/s 80C upto a sum of Rs. 1.50 lakhs[^]. However, this is not a ceiling. Amounts beyond that can also be invested in the Scheme

While the income tax relief is certainly beneficial to many, the Scheme's other attributes mean that it could also be attractive to those who have exhausted this limit.

Also, we have always maintained that equity investments are best suited for investors who can remain invested for at least five years. The three year lock-in in Parag Parikh ELSS Tax Saver Fund is much lower than this, and therefore should not deter you.

It enjoys the same Capital Gains Tax benefits as available to other equity oriented schemes (viz. Gains will be taxed at a flat rate of 12.50%* without indexation plus applicable Surcharge plus 4% Cess)

*As per Income Tax Rules prevailing for the Financial Year 2025 - 2026

[^]Please consult your financial advisor for any tax related information applicable to your investments

Understand that equity investments are ideal investments only for the long-term

Prefer simple investment solutions rather than complex ones

Welcome, rather than fear, stock market volatility

PPFAS 
MUTUAL FUND
There's only one right way®

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Parag Parikh Dynamic Asset Allocation Fund

An open ended dynamic asset allocation fund

Type of Instruments	Equities & Equity related instruments	Debt securities & Money Market instruments including Units of Debt oriented mutual fund schemes
Normal Allocation (% of Net Assets)	0-100	0-100
Risk Profile	Very High	Low to Moderate

The fund will predominantly invest in debt instruments and endeavour to maintain equity allocation between 35% and 65% (some of it will be hedged via approved derivative instruments as permitted by SEBI from time to time)

Note: Please refer to the [Scheme Information Document](#) of the Scheme for detailed asset allocation

Entry Load	Not Applicable
Exit Load	In respect of each purchase / switch-in of Units, 10% of the units ("the limit") may be redeemed without any exit load from the date of allotment. Any redemption or switch-out in excess of the limit shall be subject to the following exit load: - Exit load of 1.00% is payable if Units are redeemed / switched-out within 1 year from the date of allotment of units. - No Exit Load is payable if Units are redeemed / switched-out after 1 year from the date of allotment. Any exit load charged (net off GST, if any) shall be credited back to the Scheme.

Key Features of our Investment Strategy:

Fixed Income Investments

- A relatively wide mandate permits us to include both, 'accrual' and 'duration' related instruments in our portfolio.
- We will retain the flexibility to invest in the entire range of debt securities - Sovereign, State Government, PSU and corporate securities across all maturities - (including securitised debt) and money market instruments.
- Investment in debt securities will be guided by credit quality, liquidity, interest rates and their outlook.

Equity Investments

- Focus on choosing stocks possessing a 'margin-of-safety'.
- Preference for stocks with strong cash flows (higher Dividend payout / buybacks).
- Avail of 'special situations' as well as arbitrage opportunities, whenever they arise.

Taxation

Investors should be aware that the fiscal rules/ tax laws may change and there can be no guarantee that the current tax position may continue indefinitely. In view of the individual nature of tax implications, investors are advised to consult their professional tax advisor.

AMFI Tier 1 Benchmark Index	CRISIL Hybrid 50+50 Moderate Index
Plans	Direct and Regular
Options	Growth Income Distribution cum Capital Withdrawal Option (IDCW): Monthly Reinvestment of Income Distribution cum capital withdrawal option Monthly Payout of Income Distribution cum capital withdrawal option
Minimum amounts	Initial purchase - ₹5,000 and any amount thereafter Additional purchase - ₹500 and any amount thereafter
Systematic Investment Plan (SIP)	Monthly - 6 installments of ₹1000/- each and any amount thereafter Quarterly - 4 installments of ₹3000/- each and any amount thereafter
Expense Ratio:	For detailed TER please refer to this link: https://amc.ppfas.com/statutory-disclosures/total-expense-ratio-TER/

We recommend it to those:

- Desiring debt allocation.
- Preferring to outsource the task of managing the complexities involved in debt investing.
- Who refrain from actively trading in debt securities with the intention of profiting from interest-rate movements.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Definitions

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
Application amount for fresh subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.
Minimum additional amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1 %, the investor will enter the fund at Rs. 101. Note - As per clause 10.4.1.a of SEBI Master Circular for Mutual Funds, there shall be no entry load for all Mutual Fund schemes
Exit Load	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1 %, the redemption price would be Rs.99 per unit.
Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Beta	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Portfolio Turnover Ratio	A measure of how frequently assets within a fund are bought and sold by the managers. Portfolio turnover is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over a particular period, divided by the total net asset value (NAV) of the fund. The measurement is usually reported for a 12-month time period.
Yield to Maturity (YTM)	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
Total Expense ratio	The total expense ratio (TER) is a measure of the total cost of a fund to the investor. Total costs may include various fees (purchase, redemption, auditing) and other expenses. The TER, calculated by dividing the total annual cost by the fund's total assets averaged over that year, is denoted as a percentage.
Derivative	Derivative includes (i) a security derived from a debt instrument, share, loan whether secured or unsecured, risk instrument or contract for differences or any other form of security; (ii) a contract which derives its value from the prices, or index of prices, or underlying securities.
Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
