

Managing your money using Value Investing principles!

About Parag Parikh Flexi Cap Fund (Please visit Page 10)

Parag Parikh Flexi Cap Fund (PPFCF) is an open ended equity oriented scheme with flexibility to invest a minimum of 65% in Indian equities and up to 35% in overseas equity security and domestic debt / money market securities.

The core portfolio consists of equity investments made with a long term outlook and the factors considered while investing are quality of management, quality of the sector and the business (return on capital, entry barriers, capital intensity, use of debt, growth prospects etc) and the valuation of the companies. The endeavor of the fund management team is to identify opportunities for long term investments. However, there are times when the opportunities are not attractive enough. While waiting for attractive opportunities, the fund invests in arbitrage opportunities between the cash and futures equity markets and special situations arbitrage where open offers / delisting / merger events have been announced. Investments are also made in money market / debt securities while waiting for deployment in core equity investments.

Outlook

We continue to look at individual investments on their own merits and will not hesitate to invest if an opportunity looks attractive. As usual, our investment stance does not depend much on the macro-economic situation but is focussed on individual companies. We have about 21.34% in cash holdings, debt & money market instruments and arbitrage positions which can be deployed in long term investments at appropriate levels.

Source of MTF book and potential impact on liquid funds

Margin Trading Facility (MTF)

MTF allows investors to buy shares by paying only a portion of the total transaction value. The broker funds the remaining amount and charges interest on the funded portion, typically in the range of 9%–16%*, depending on the broker and market conditions.

Size of the MTF Book as of December 2025:

Source: NSE, (Rs. in Crores)

The MTF Book has increased from Rs 24,920 crore in FY 23 to Rs 1,16,000 crore as of December 2025. The number appears substantial; it is as big as daily equity cash segment turnover and it reflects the scale of broker funding through MTF. It is provided solely for informational and credit assessment purposes.

The MTF Book remains concentrated with large bank-backed brokers with close to 50%* of market share, while brokers such as Zerodha, Angel One, Motilal Oswal, and Bajaj Securities each command for 5–6%* market share. The balance is fragmented across the long tail of smaller brokers, and that's where credit and liquidity risk may be relatively higher.

Under current regulations, brokers can fund the positions using their own capital, borrowings from NBFCs, or by issuing commercial papers. Banks face restrictions from the RBI on margin funding and investing in such instruments, which may affect their liquidity and funding flexibility. Consequently, a broker's source and cost of funding are key factors in assessing their stability, credit evaluation and potential exposure risks during market stress.

Recent market discussions have highlighted the counterparty risk and potential losses brokers may face during corrections or crashes, i.e. during periods of high market stress. Market volatility may impact broker funding, potentially leading to margin calls by brokers and the squaring off of leveraged positions. This can increase counterparty credit risk, particularly if liquidity is constrained. However, brokers' risk management practices, such as stock-specific limits and single-investor exposure limits, act as additional safeguards, helping to protect positions during periods of extreme market stress.

Our take on investment in Broking companies

One naturally looks at the returns and sometimes misses out on the risk management aspect of the fund. We have often communicated that the liquid fund is a cash management product and not a return optimization tool. Robust risk management processes are in place for our cash management products to manage credit and liquidity exposures within the portfolio.

To manage risk in the current market environment, exposure to broking companies (bank-backed only) is capped at a maximum of 5%* of the Parag Parikh Liquid Fund's portfolio, with exposure to any single company limited to 3%*. These limits are significantly lower than the industry average of approximately 11%, with exposures in certain cases reaching as high as 17–18%. We monitor the portfolio on an ongoing basis for market conditions and company-specific risks and adjust the portfolio as and when needed.

Investment Rationale for Bank backed broking companies

Liquidity: The commercial papers of the broking companies we have invested in are liquid in the secondary market and are widely held by institutional investors (excluding banks) and corporates. The liquidity allows us to adjust our exposure to broking companies without causing disruption in the portfolio.

Diversified income sources: The portfolio companies have diversified income sources other than MTF, such as brokerage income, income from distribution of Mutual Funds, insurance products etc. This diversification reduces dependency on any single source of income, supporting stability from a credit and liquidity perspective.

Liquidity Buffer: Excess borrowings are parked in fixed deposits above the margin requirements for immediate liquidity. Ageing MTF receivables (15–30 days*) can also be liquidated quickly if needed, reducing the refinancing risk for them.

Parent Support: Approved capital infusion from the parent bank provides a strong solvency backstop. Risk management practices are aligned with processes approved and monitored by the parent entity.

These elements collectively reflect a structured, risk-conscious approach to investing in broking companies, emphasizing prudent management of credit and liquidity exposures. The portfolio maintains flexibility while staying aligned with the Fund's investment guidelines.

Parag Parikh ELSS Tax Saver Fund

An open-ended equity linked saving scheme with a statutory lock in of 3 years and tax benefit

An India-centric Scheme suitable for long-term capital appreciation

Parag Parikh ELSS Tax Saver Fund

India-centric Scheme

↳ At least **80%** of the Parag Parikh ELSS Tax Saver Fund's corpus will be invested in Indian equities.

It has the freedom to:

- ↳ Invest in stocks of small, medium and large-sized Companies based in India.
- ↳ Invest in any sector or industry within India which appears to be attractively valued
- ↳ Participate in buy-backs and other special situations within India.

About the Scheme...

It is an open-ended Equity Linked Savings Scheme (ELSS) with a statutory lock-in of 3 years and tax benefit from the date of investment for every investment instalment.

Indian investors who opt for old regime of income tax and invest in this Scheme are eligible for Income Tax deduction u/s 80C upto a sum of Rs. 1.50 lakhs[^]. However, this is not a ceiling. Amounts beyond that can also be invested in the Scheme

While the income tax relief is certainly beneficial to many, the Scheme's other attributes mean that it could also be attractive to those who have exhausted this limit.

Also, we have always maintained that equity investments are best suited for investors who can remain invested for at least five years. The three year lock-in in Parag Parikh ELSS Tax Saver Fund is much lower than this, and therefore should not deter you.

It enjoys the same Capital Gains Tax benefits as available to other equity oriented schemes (viz. Gains will be taxed at a flat rate of 12.50%* without indexation plus applicable Surcharge plus 4% Cess)

*As per Income Tax Rules prevailing for the Financial Year 2025 - 2026

[^]Please consult your financial advisor for any tax related information applicable to your investments

Understand that equity investments are ideal investments only for the long-term

Prefer simple investment solutions rather than complex ones

Welcome, rather than fear, stock market volatility

MUTUAL FUND
There's only one right way®

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Parag Parikh Dynamic Asset Allocation Fund

An open ended dynamic asset allocation fund

Type of Instruments	Equities & Equity related instruments	Debt securities & Money Market instruments including Units of Debt oriented mutual fund schemes
Normal Allocation (% of Net Assets)	0-100	0-100
Risk Profile	Very High	Low to Moderate

The fund will predominantly invest in debt instruments and endeavour to maintain equity allocation between 35% and 65% (some of it will be hedged via approved derivative instruments as permitted by SEBI from time to time)

Note: Please refer to the [Scheme Information Document](#) of the Scheme for detailed asset allocation

Entry Load	Not Applicable
Exit Load	In respect of each purchase / switch-in of Units, 10% of the units ("the limit") may be redeemed without any exit load from the date of allotment. Any redemption or switch-out in excess of the limit shall be subject to the following exit load: - Exit load of 1.00% is payable if Units are redeemed / switched-out within 1 year from the date of allotment of units. - No Exit Load is payable if Units are redeemed / switched-out after 1 year from the date of allotment. Any exit load charged (net off GST, if any) shall be credited back to the Scheme.

Key Features of our Investment Strategy:

Fixed Income Investments

- A relatively wide mandate permits us to include both, 'accrual' and 'duration' related instruments in our portfolio.
- We will retain the flexibility to invest in the entire range of debt securities - Sovereign, State Government, PSU and corporate securities across all maturities - (including securitised debt) and money market instruments.
- Investment in debt securities will be guided by credit quality, liquidity, interest rates and their outlook.

Equity Investments

- Focus on choosing stocks possessing a 'margin-of-safety'.
- Preference for stocks with strong cash flows (higher Dividend payout / buybacks).
- Avail of 'special situations' as well as arbitrage opportunities, whenever they arise.

Taxation

Investors should be aware that the fiscal rules/ tax laws may change and there can be no guarantee that the current tax position may continue indefinitely. In view of the individual nature of tax implications, investors are advised to consult their professional tax advisor.

AMFI Tier 1 Benchmark Index	CRISIL Hybrid 50+50 Moderate Index
Plans	Direct and Regular
Options	Growth Income Distribution cum Capital Withdrawal Option (IDCW): Monthly Reinvestment of Income Distribution cum capital withdrawal option Monthly Payout of Income Distribution cum capital withdrawal option
Minimum amounts	Initial purchase - ₹5,000 and any amount thereafter Additional purchase - ₹500 and any amount thereafter
Systematic Investment Plan (SIP)	Monthly - 6 installments of ₹1000/- each and any amount thereafter Quarterly - 4 installments of ₹3000/- each and any amount thereafter
Expense Ratio:	For detailed TER please refer to this link: https://amc.ppfas.com/statutory-disclosures/total-expense-ratio-TER/

We recommend it to those:

- Desiring debt allocation.
- Preferring to outsource the task of managing the complexities involved in debt investing.
- Who refrain from actively trading in debt securities with the intention of profiting from interest-rate movements.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Definitions

Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
Application amount for fresh subscription	This is the minimum investment amount for a new investor in a mutual fund scheme.
Minimum additional amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.
SIP	SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1 %, the investor will enter the fund at Rs. 101. Note - As per clause 10.4.1.a of SEBI Master Circular for Mutual Funds, there shall be no entry load for all Mutual Fund schemes
Exit Load	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1 %, the redemption price would be Rs.99 per unit.
Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
Beta	Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Portfolio Turnover Ratio	A measure of how frequently assets within a fund are bought and sold by the managers. Portfolio turnover is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over a particular period, divided by the total net asset value (NAV) of the fund. The measurement is usually reported for a 12-month time period.
Yield to Maturity (YTM)	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
Total Expense ratio	The total expense ratio (TER) is a measure of the total cost of a fund to the investor. Total costs may include various fees (purchase, redemption, auditing) and other expenses. The TER, calculated by dividing the total annual cost by the fund's total assets averaged over that year, is denoted as a percentage.
Derivative	Derivative includes (i) a security derived from a debt instrument, share, loan whether secured or unsecured, risk instrument or contract for differences or any other form of security; (ii) a contract which derives its value from the prices, or index of prices, or underlying securities.
Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
